About

The `<Command />` component uses the `cmdk` component by [pacocoursey](#).

Installation

CLI

Manual

pnpm

npm

yarn

bun

pnpm dlx shadcn@latest add command

Usage

```
import {
  Command,
  CommandDialog,
  CommandEmpty,
  CommandGroup,
  CommandInput,
  CommandItem,
  CommandList,
  CommandSeparator,
  CommandShortcut,
} from "@components/ui/command"
```

```
<Command>
  <CommandInput placeholder="Type a command or search..." />
  <CommandList>
    <CommandEmpty>No results found.</CommandEmpty>
    <CommandGroup heading="Suggestions">
      <CommandItem>Calendar</CommandItem>
      <CommandItem>Search Emoji</CommandItem>
      <CommandItem>Calculator</CommandItem>
    </CommandGroup>
    <CommandSeparator />
    <CommandGroup heading="Settings">
      <CommandItem>Profile</CommandItem>
      <CommandItem>Billing</CommandItem>
      <CommandItem>Settings</CommandItem>
    </CommandGroup>
  </CommandList>
</Command>
```

Examples

Dialog

Preview

Code

Style: New York

Open in

Press ⌘ J

To show the command menu in a dialog, use the `<CommandDialog />` component.

```
export function CommandMenu() {
  const [open, setOpen] = React.useState(false)

  React.useEffect(() => {
    const down = (e: KeyboardEvent) => {
      if (e.key === "k" && (e.metaKey || e.ctrlKey)) {
        e.preventDefault()
        setOpen((open) => !open)
      }
    }
    document.addEventListener("keydown", down)
    return () => document.removeEventListener("keydown", down)
  }, [])

  return (
    <CommandDialog open={open} onOpenChange={setOpen}>
      <CommandInput placeholder="Type a command or search..." />
      <CommandList>
        <CommandEmpty>No results found.</CommandEmpty>
        <CommandGroup heading="Suggestions">
          <CommandItem>Calendar</CommandItem>
          <CommandItem>Search Emoji</CommandItem>
          <CommandItem>Calculator</CommandItem>
        </CommandGroup>
      </CommandList>
    </CommandDialog>
  )
}
```

Combobox

You can use the `<Command />` component as a combobox. See the [Combobox](#) page for more information.

Changelog

2024-10-25 Classes for icons

Added `gap-2 [&_svg]:pointer-events-none [&_svg]:size-4 [&_svg]:shrink-0` to the `<CommandItem />` to automatically style icon inside.

Add the following classes to the `cva` call in your `command.tsx` file.

command.tsx

```
1  const CommandItem = React.forwardRef<
2    React.ElementRef<typeof CommandPrimitive.Item>,
3    React.ComponentPropsWithoutRef<typeof
CommandPrimitive.Item>
4  >(({ className, ...props }, ref) => (
5    <CommandPrimitive.Item
6      ref={ref}
7      className={cn(
8        "... gap-2 [&_svg]:pointer-events-none
[&_svg]:size-4 [&_svg]:shrink-0",
9        className
10     )}
11     { ... props}
12   />
13 ))
```
