Docs > CLI

CLI

Use the CLI to add components to your project.

Note: We just released a new `shadcn` CLI. See the [changelog](#) for more information.

init

Use the `init` command to initialize configuration and dependencies for a new project.

The `init` command installs dependencies, adds the `cn` util, configures `tailwind.config.js`, and CSS variables for the project.

```
pnpm npm yarn bun

pnpm dlx shadcn@latest init
```

You will be asked a few questions to configure `components.json` :

```
1 Which style would you like to use? > New York
2 Which color would you like to use as base color? > Zinc
3 Do you want to use CSS variables for colors? > no / yes
```

Options

```
Usage: shadcn init [options] [components...]

initialize your project and install dependencies

Arguments:
  components      the components to add or a url to the component.

Options:
  -d, --defaults  use default values i.e new-york, zinc and css variables. (default: false)
  -f, --force     force overwrite of existing components.json. (default: false)
  -y, --yes       skip confirmation prompt. (default: false)
  -c, --cwd <cwd> the working directory. defaults to the current directory.
  -h, --help      display help for command
```

add

Use the `add` command to add components and dependencies to your project.

```
pnpm npm yarn bun

pnpm dlx shadcn@latest add [component]
```

You will be presented with a list of components to choose from:

```
Which components would you like to add? > Space to select, A to toggle all.
Enter to submit.

  ☐ accordion
  ☐ alert
  ☐ alert-dialog
  ☐ aspect-ratio
  ☐ avatar
  ☐ badge
  ☐ button
  ☐ calendar
  ☐ card
  ☐ checkbox
```

Options

```
Usage: shadcn add [options] [components...]

add a component to your project

Arguments:
  components      the components to add or a url to the component.

Options:
  -y, --yes       skip confirmation prompt. (default: false)
  -o, --overwrite overwrite existing files. (default: false)
  -c, --cwd <cwd> the working directory. defaults to the current directory.
  -a, --all       add all available components. (default: false)
  -p, --path <path> the path to add the component to.
  -h, --help      display help for command
```

Monorepo

In a monorepo, you can specify the path to your workspace with the `-c` or `--cwd` option.

```
pnpm npm yarn bun

pnpm dlx shadcn@latest init -c ./apps/www
```

or

```
pnpm npm yarn bun

pnpm dlx shadcn@latest add alert-dialog -c ./apps/www
```
