Installation

How to install dependencies and structure your app.

Frameworks

Next.js	Vite
Remix	Astro
Laravel	Gatsby
Manual	

TypeScript

This project and the components are written in TypeScript. We recommend using TypeScript for your project as well.

However we provide a JavaScript version of the components as well. The JavaScript version is available via the cli.

To opt-out of TypeScript, you can use the `tsx` flag in your `components.json` file.

components.json

```
{
  "style": "default",
  "tailwind": {
    "config": "tailwind.config.js",
    "css": "src/app/globals.css",
    "baseColor": "zinc",
    "cssVariables": true
  },
  "rsc": false,
  "tsx": false,
  "aliases": {
    "utils": "~/lib/utils",
    "components": "~/components"
  }
}
```

To configure import aliases, you can use the following `jsconfig.json`:

jsconfig.json

```
{
  "compilerOptions": {
    "paths": {
      "@/*": ["./*"]
    }
  }
}
```
